DETAILED ACTION

Allowable Subject Matter

1. Claims 16-46 are allowed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

Regarding claims 16 and 17, the essential difference from the prior art is determining the density of the slurry as a function of a comparison between the measured buoyant weight of the camera in the slurry and the reference weight of the camera in the air. These features in combination with the other elements of the claim and the base claim are not disclosed or suggested by the prior art of record.

Regarding claim 32, the essential difference from the prior art is determining an amount of a deposit—"debris such as sedimentary deposits located [at] the bottom of the borehole" (Arguments, page 10)—as a function of the measured penetration resistance of the probe. These features in combination with the other elements of the claim and the base claim are not disclosed or suggested by the prior art of record.

Regarding claim 46, the essential difference from the prior art is measuring penetration at a bottom of a borehole with a probe that comprises a graduated bar protruding from the housing and connected to the housing by a spring, and bar being in the viewing area of the camera.

These features in combination with the other elements of the claim and the base claim are not disclosed or suggested by the prior art of record.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Citation of Relevant Prior Art

- 3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
- a. Head U.S. Patent No. 5,379,216 discloses a system for inspecting a borehole that determines the volume of deposit based on the *electrical* resistance of the deposit (col. 11, lines 54-60).
- b. Ciglenec et al., U.S. Patent No. 6,164,126 discloses a probe for measuring penetration on a bottom of a borehole comprising a spring mechanism.
- c. Shwe et al., U.S. Patent No. 5,587,525 discloses a system for determining the volume of deposit in a bottom of a borehole.

Contact Information

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Charles Kim whose telephone number is 571-272-7421. The examiner can normally be reached on Mon thru Thurs 8:30am to 6pm and alternating Fri 9:30am to 6pm.

Art Unit: 2624

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jingge Wu can be reached on 571-272-7429. The fax phone number for the organization where this application or proceeding is assigned is 571-272-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
